## Greetings!

Fall has arrived in glorious colors! Although the variability in leaf color is desired and beautiful, variability in your clinical trial results is not desired.

This newsletter's theme is Clinical Quality Assurance (CQA). The articles below discuss CQA and offer suggestions for improving quality. Our blog this month is about how to instill quality into your clinical research processes.

I hope you enjoy our newsletter and enjoy the beauty of Fall Foliage.

## Spotlight on Research Dynamics Clinical QA and Auditing Services

Although Research Dynamics is known for its training courses, RDCG also has CRO services including Clinical QA auditing and consulting services to assist you in building quality systems and procedures. Our QA services provide SOPs (template or custom), work flow analysis to improve SOPs, and consulting services to develop the most efficient and cost effective procedures for a Site or a Sponsor. Our CQA auditing services provide auditing staff who have experience auditing Investigator sites, Sponsors, CROs and IRBs. We provide a full audit and audit report with recommendations for improvements. We also provide consulting services after the audit to develop and implement corrective action plans (CAPA) or new procedures.

Since we are also a training company, we can provide custom training courses that focus on eliminating the weaknesses uncovered during the audit and on key areas of research that need additional training time. After the audit, Research Dynamics can utilize its other expertise to provide and implement Corrective Action Plans and custom training courses to resolve audit findings quickly and improve the quality of your trials.

## Spotlight on our Training Course - Clinical Quality Assurance and Audit Conduct

Since this newsletter focuses on quality, we are highlighting our training course "Clinical Quality Assurance and Audit Conduct". The course provides background information on CQA and provides procedures for conducting CQA audits.

Since we also conduct QA audits for our clients, we have up-to-date information, examples, and experience to share with you during the course. In the past month we have conducted audits in oncology and medical devices. For more information, please visit [audit training course link here](#)

## New Blog Post: Building Quality Into Your Clinical Trials

Although clinical research according to GCP requirements has been conducted for decades, there is still much variability in the conduct of research at sites and in the quality of monitoring by the Sponsors. How do we build and measure quality into our clinical trials? Let's review some of the reasons for the poor quality and then discuss ways to build-in quality...

## Webinar Training Programs: Training at your desk or in your conference room

Research Dynamics provides LIVE GCP training webinars for Academic Medical Centers, Investigator Sites, Sponsors, and other personnel involved in Clinical Research.

Beginner, Refresher, and Advanced GCP Webinars will be available at your computer and provide GCP and clinical trial training whenever you want it!

Here's some real feedback from one of our webinar students:

*"My training with Research Dynamics Consulting Group far exceeded my expectations! The training was extremely thorough, but also allowed for quality Q & A sessions with Lorraine. I especially enjoyed hearing about the real life scenarios that can occur in clinical research and the importance of detailed records and communication!!"*  
-Clinical Research Professional, 2012
